

## PROFESSIONAL SUMMARY

Java Full Stack Engineer with 5+ years of experience delivering scalable, cloud-native applications across fintech, healthcare, and enterprise domains. Proven track record of reducing API response times by 35%, supporting systems serving 1M+ daily users, and modernizing monolithic architectures into microservices. Adept at owning full delivery cycles — from Spring Boot APIs and ReactJS interfaces to Kubernetes deployments and CI/CD pipelines — across Azure, AWS environments.

## TECHNICAL SKILLS

|                        |                                                                                |
|------------------------|--------------------------------------------------------------------------------|
| Programming Languages  | Java 8/11/17/21, Python, JavaScript, TypeScript, SQL, Bash                     |
| Backend Technologies   | Spring Boot, Spring Security, Hibernate, JPA, JDBC, Maven, Gradle              |
| Frontend Technologies  | ReactJS, Angular, HTML5, CSS3                                                  |
| API Development        | RESTful APIs, GraphQL, Swagger/OpenAPI                                         |
| Security Technologies  | Spring Security, JWT, OAuth2, RBAC                                             |
| Messaging Technologies | Apache Kafka, RabbitMQ, Google Pub/Sub                                         |
| Database Technologies  | PostgreSQL, Oracle, MySQL, MongoDB, Redis                                      |
| Cloud Platforms        | Microsoft Azure, Amazon Web Services (AWS)                                     |
| Cloud Services         | EC2, S3, RDS, Lambda, Azure Functions                                          |
| DevOps Technologies    | Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, CI/CD                  |
| Testing & Monitoring   | JUnit 5, Mockito, SonarQube, Splunk, Prometheus, Grafana                       |
| Software Architecture  | Microservices, Distributed Systems, Event-Driven Architecture, Design Patterns |
| Methodologies          | Agile/Scrum, Code Reviews, Technical Documentation                             |
| Development Tools      | Git, GitHub, GitLab, Jira, IntelliJ IDEA, VS Code, ServiceNow                  |

## PROFESSIONAL EXPERIENCE

### Java Full Stack Engineer (Contract)

Yeskar Technologies Inc.

Apr 2026 — Present

Franklin, WI

- Architected Spring Boot microservices across 10+ cloud initiatives, accelerating feature delivery by approximately 25%.
- Designed RESTful APIs with PostgreSQL supporting real-time reporting and cloud utilization analysis.
- Standardized Docker and Kubernetes configurations across 3+ environments, reducing release incidents.
- Automated operational workflows cutting manual engineering effort by 30% and recovering 8 hours weekly.
- Built Jenkins and GitHub Actions CI/CD pipelines enabling reliable weekly releases with auto-rollback.
- Maintained 99.9% uptime using Prometheus and Grafana monitoring with SLA-compliant incident resolution.
- Authored deployment runbooks and API documentation adopted as team standards for operations.

### Java Full Stack Engineer

OpenQQuantify

Jun 2025 — Mar 2026

Cincinnati, OH

- Led development of cloud-native fintech applications using Java 17, Spring Boot, ReactJS, and PostgreSQL.
- Built 20+ RESTful APIs handling 50K+ daily requests with sub-200ms average response times.
- Reduced API latency by 35% through PostgreSQL schema tuning and indexing optimization.
- Secured 15+ endpoints using Spring Security, JWT, OAuth2, and RBAC in multi-tenant environments.
- Achieved 99.95% uptime through Kubernetes auto-scaling and zero-downtime deployments.
- Reduced page load times by 40% using Angular lazy loading and optimized TypeScript state management.
- Processed 100K+ financial events daily using Kafka with dead-letter queue handling.
- Managed Terraform infrastructure on AWS and Azure reducing provisioning from hours to minutes.

### Java Backend Developer (Contract)

Sodexo

Jul 2024 — May 2025

Cincinnati, OH

- Built Java and SQL workflows processing 10K+ records, saving approximately 3 hours daily.
- Integrated three vendor APIs improving inventory data accuracy by nearly 20% across operations.
- Delivered features across 10+ Agile sprints with zero carryover for six consecutive cycles.
- Increased code coverage from 45% to 80% using JUnit 5 and Mockito, reducing defects by 30%.
- Resolved production incidents and managed deployments maintaining stable application uptime.
- Reduced onboarding time by 20% through comprehensive technical and operational documentation.

### Java Software Engineer (Contract)

Aramark (Client: Athenian Grill)

Aug 2023 — Jun 2024

Cincinnati, OH

- Built Spring Boot microservices supporting 5+ internal applications used by cross-functional teams.
- Integrated external reporting APIs improving dashboard data accuracy by approximately 15%.

- Identified bottlenecks using Splunk and Prometheus reducing API latency by 20%.
- Containerized three legacy services with Docker ensuring consistency across environments.
- Authored API documentation and system specifications streamlining integrations for external teams.
- Wrote integration test suites covering 10+ API endpoints, reducing QA cycle time by 20%.

#### Software Engineer

Motorola Solutions

Jun 2021 — Jul 2023

Bangalore, India

- Built Java Spring Boot applications for mission-critical systems serving over 1M users daily.
- Refactored a 200K-line monolith into eight microservices reducing deployment downtime by 60%.
- Designed 25+ RESTful APIs with Swagger documentation adopted by three engineering teams.
- Reduced inter-service dependencies by 40% using Kafka and RabbitMQ event-driven workflows.
- Automated Jenkins CI/CD pipelines for bi-weekly releases reducing deployment effort by 50%.
- Developed Python and Node.js modules processing 100K+ transactions daily with alerting support.
- Optimized SQL queries on datasets exceeding 500K records reducing execution time by 45%.
- Mentored two junior engineers through code reviews contributing to a 25% defect reduction.

#### Software Engineering Analyst

Deloitte (Academic Industry Program)

Jan 2022 — Apr 2022

Bangalore, India

- Built Python and SQL automation utilities reducing report generation by two hours per cycle.
- Contributed Azure and AWS provisioning scripts supporting automated setup for two clients.
- Developed and validated REST API test cases ensuring data integrity across integrations.
- Performed data validation and UAT testing across 3 modules ensuring zero defects at client handoff.
- Documented API workflows and data flow diagrams reducing cross-team ambiguity on 2 client projects.

#### Software Engineer Intern

Mad Crayons

Jun 2020 — Jun 2021

Delhi, India

- Built Flask and Java prototypes for analytics, with two adopted into production pipelines.
- Maintained Git workflows for a six-member team reducing merge conflicts by approximately 30%.
- Contributed to feature delivery, bug fixes, and QA efforts across four product releases.
- Built reusable React UI components used across 3 internal tools, improving dev consistency.
- Wrote unit tests covering core analytics modules, catching 15+ bugs before production releases.
- Collaborated with design team to implement responsive UI layouts improving mobile usability.

## PROJECTS

#### Cloud Cost Optimizer

Java 17, Spring Boot, ReactJS, PostgreSQL, Azure SDK, Terraform, Docker, Kubernetes

- Developed a cloud optimization platform generating cost-saving recommendations for compute and storage services.
- Designed and implemented 12+ RESTful APIs supporting resource discovery, utilization analysis, and reporting.
- Built ReactJS dashboards integrating Azure SDKs to visualize spending trends and utilization metrics.

#### Insurance Claims Management System

Java 17, Spring Boot, Kafka, Redis, PostgreSQL, Microservices, Docker

- Developed an event-driven claims platform utilizing Kafka for asynchronous microservice communication.
- Implemented Redis caching reducing database latency by 40% and improving API responsiveness.
- Designed Spring Boot microservices supporting claim submission, approval, settlement, and notifications.

#### Healthcare Patient Portal

Java 17, Spring Boot, ReactJS, PostgreSQL, Spring Security, JWT, Docker

- Developed a healthcare portal supporting appointment scheduling, registration, and medical records.
- Implemented Spring Security, JWT, and OAuth2 securing application endpoints and user access.
- Designed PostgreSQL schemas and ReactJS interfaces improving accessibility and patient interactions.

## EDUCATION

Master of Engineering in Computer Science, University of Cincinnati

Aug 2023 — May 2025

Bachelor of Technology in Computer Science, Koneru Lakshmaiah Education Foundation

Jul 2018 — Apr 2022

## CERTIFICATIONS

Automation Anywhere Certified Advanced RPA Professional

Microsoft Azure Fundamentals (AZ-900)

ServiceNow Certified System Administrator (CSA)
