Professional Details

Target Roles: Java Software Engineer, Java Developer, Backend Java Developer

Core Relevance: Java, Spring Boot, REST APIs, Microservices, PostgreSQL, Apache Kafka, Docker, Kubernetes

Professional Summary

Java-focused Software Engineer building Spring Boot services, REST APIs, microservices, secure IAM workflows, event-driven integrations, and cloud-ready applications. Strong hands-on background with Java 17, Spring Security, JWT/OAuth2, PostgreSQL, Kafka, Docker, Kubernetes, AWS/Azure, CI/CD automation, observability, and React-based full-stack delivery. Comfortable owning backend work from requirements and API design through testing, deployment support, documentation, and production troubleshooting.

Backend Strengths: Java, Spring Boot, REST APIs, Microservices, PostgreSQL, Apache Kafka, Docker, Kubernetes, secure banking workflows, auditability, controlled delivery, and reliable account APIs, testing, documentation, release support, and production troubleshooting.

Technical Skills

Java Backend: Java, Spring Boot, REST APIs, Microservices, Java 17, Spring MVC, Spring Security, Hibernate, Spring Data JPA, Maven

Security and IAM: Spring Security, OAuth2, JWT, Identity and Access Management, SailPoint IdentityIQ, RBAC, access reviews, provisioning workflows

Cloud and DevOps: Docker, Kubernetes, AWS, Azure, CI/CD, Git, Terraform, Jenkins, GitHub Actions

Data and Messaging: PostgreSQL, Apache Kafka, Redis, Oracle, MySQL, RabbitMQ

Frontend and Quality: React, JavaScript, JUnit, Mockito, TypeScript, HTML/CSS, Prometheus, Grafana, Splunk

Projects

- **Cloud Cost Optimizer** – Cloud analytics application with Java/Spring Boot APIs, React dashboards, Azure resource analysis, Docker/Kubernetes deployment patterns, and Terraform-based infrastructure structure. **GitHub**
- **Healthcare Patient Portal** – Full-stack healthcare workflow platform with Spring Boot APIs, React screens, JWT security, PostgreSQL/Flyway persistence, Dockerized setup, and role-aware patient, doctor, and admin access. **GitHub**
- **Insurance Claims Management System** – Event-driven claims platform using Spring Boot, Kafka, PostgreSQL, Redis, Docker, validation workflows, asynchronous claim-status updates, and operational API endpoints. **GitHub**

Project Relevance: GitHub-visible Java systems aligned to Java, Spring Boot, REST APIs, Microservices, PostgreSQL, Apache Kafka, Docker, Kubernetes, database modeling, authentication flows, and deployable backend services.

Professional Experience

Yeskar Technologies Inc

Apr 2026 – Present

Software Engineer | Java Backend & Cloud Services

- Build Java/Spring Boot services for secure banking workflows, reporting, and backend modernization.
- Document backend workflows and operational runbooks to improve handoffs across development and support teams.
- Maintain CI/CD workflows for controlled releases, validation, and deployment consistency.
- Collaborate with distributed engineering teams on API contracts, deployment notes, code reviews, and troubleshooting.
- Design REST APIs, service contracts, validation rules, and PostgreSQL models for account-style integrations.
- Containerize backend services with Docker and support Kubernetes deployment patterns across environments.
- Write JUnit/Mockito tests and verify API behavior across positive, negative, and role-based scenarios.
- Implement service metrics, dashboards, and production-health checks with Prometheus and Grafana.

OpenQQuantify

Jun 2025 – Apr 2026

Java Full Stack Engineer | Spring Boot, React & APIs

- Developed Java 17/Spring Boot microservices, REST APIs, and React interfaces for secure banking workflows.
- Implemented Spring Security, JWT, OAuth2, and RBAC patterns for secure customer/account access.
- Tuned PostgreSQL queries, indexes, and repositories for reliable banking-style backend responses.
- Supported Kafka workflows for async processing, retry handling, validation, and dead-letter queues.
- Used Docker, Kubernetes, Terraform, and cloud services to improve deployment repeatability.
- Prepared API documentation, sample payloads, and implementation notes for handoff and support readiness.
- Partnered with frontend and backend contributors to align API behavior, validation rules, and release readiness.

Earlier Professional Experience

Motorola Solutions

Jun 2021 – Jul 2023

Software Engineer | Java Microservices & API Engineering

- Built Java/Spring Boot backend services requiring secure APIs, traceability, and operational reliability.
- Refactored monolithic components into microservices to improve maintainability and deployment flexibility.
- Designed REST APIs, service contracts, and backend integration flows for downstream application teams.
- Implemented Kafka/RabbitMQ event-driven workflows for asynchronous processing and service decoupling.
- Supported Jenkins CI/CD pipelines, release validation, code reviews, debugging, and documentation.
- Wrote unit and integration tests for service-layer logic, API validation, and persistence workflows.
- Troubleshooted backend defects across API, database, messaging, and deployment layers during release cycles.

Deloitte

Jan 2022 – Apr 2022

Software Engineering Analyst | Java & SailPoint IAM

- Developed Java-based utilities and backend workflows for identity and access management use cases.
- Worked with SailPoint IdentityIQ concepts including lifecycle, access reviews, provisioning, and RBAC.
- Built and tested REST API integrations for user, role, entitlement, and access-management data flows.
- Used SQL to validate identity, account, and entitlement data across application/reporting workflows.
- Reviewed access-control scenarios with teams to confirm role mappings, approvals, and provisioning outcomes.
- Supported UAT, defect validation, documentation, and troubleshooting for IAM integrations.

Mad Crayons

Jun 2020 – Jul 2021

Software Engineer Intern | Java, Spring Boot & React

- Developed Java/Spring Boot and Flask prototypes for web applications, analytics workflows, and internal tools.
- Supported SQL-backed features, Git-based development, unit tests, defect fixes, and release-readiness checks.
- Collaborated with designers and developers to deliver responsive, maintainable web interfaces.
- Built reusable React components and integrated frontend screens with backend REST APIs.
- Assisted with backend request validation, exception handling, API response formats, and UI integration testing.

Additional Experience

Sodexo

Jul 2024 – May 2025

Student Worker | Operations & Team Support

- Supported campus operations through inventory checks, order coordination, issue tracking, and documentation.
- Built transferable strengths in accountability, process discipline, communication, and structured problem solving.
- Coordinated daily handoffs and tracked recurring issues to keep operations consistent across shifts.

Athenian Hospitality

Aug 2023 – Jun 2024

Student Worker | Hospitality Operations

- Developed strengths in customer focus, documentation, communication, ownership, and fast-paced execution.
- Supported hospitality operations through shift preparation, checklists, inventory support, and issue escalation.
- Followed repeatable checklists and escalation paths while supporting teams in high-volume service periods.

Education

University of Cincinnati – Master of Engineering, Computer and Information Sciences

Aug 2023 – May 2025

Koneru Lakshmaiah Education Foundation – Bachelor of Technology, Computer Science Engineering

Jul 2018 – Apr 2022

Certifications

Microsoft Azure Fundamentals | Java Programming Masterclass | SOLID Principles of Object-Oriented Design | ServiceNow Certified System Administrator | Automation Anywhere Advanced RPA Professional

Engineering Practices

- ATS-relevant focus across Java, Spring Boot, REST APIs, microservices, SQL, cloud, IAM, and DevOps tooling.
- Banking-aware API design, secure coding, debugging, technical documentation, Agile delivery, and code reviews.
- Interview-ready project narrative covering architecture, API flow, security model, database design, and deployment.
- Production monitoring, release validation, CI/CD troubleshooting, and operational handoff documentation.
- Backend ownership across requirements review, implementation, testing, deployment support, and issue resolution.

Role Alignment: Strong match for Java backend, full-stack Java, cloud application, and IAM roles requiring Java, Spring Boot, REST APIs, Microservices, PostgreSQL, Apache Kafka, Docker, Kubernetes, secure banking workflows, auditability, controlled delivery, and reliable account APIs, testing, documentation, release support, and production troubleshooting.
